Deployment to an approved stage failed  Notifies the team when a deployment team approved does not	succeed and makes the stage unhealthy	<b>(</b>	Deployment completed (any project)	★ techt_databricks_cicd Team     Individual members	
Deployment completion failures  Notifies the team when a deployment team requested does not	succeed and makes the stage unhealthy	<b>⊕</b>	Deployment completed (any project)	⊕ techt_databricks_cicd Team     Individual members	
Deployment approval pending  Notifies the team when an approval for a deployment is pending	g on the team	<b>⊕</b>	Release approval pending (any project)	⊕ techt_databricks_cicd Team Individual members	

## Utilise Azure DevOps Dashboards

• Summarise status of builds, releases, commits and more in

one place

## Folder organisation

- Plan the structure of folders before integration – changes within folder system require changes in integration configuration
- Name of deployed notebook will be the one you configured in the git integration steps from the beginning
